APP PORTFOLIO · DESIGNED & BUILT IN-HOUSE

Stackbook

Every tool your projects depend on, in one glanceable place.

A small native macOS reference app for tracking the websites, APIs, hosting tools, databases, and services used across projects — the tribal knowledge, written down.

WHAT IT DOES

- **Glanceable & searchable**
  Every resource in one fast, filterable list.
- **Grouped by project**
  See instantly which services each project depends on, and what they're for.
- **Plain-language purpose**
  Each entry records what the tool is for, in words a new teammate understands.
- **Quick actions**
  Open a resource's site or copy its reference details in one click.
- **Deliberately secret-free**
  Stores no passwords or API keys — a reference, not a vault.

UNDER THE HOOD

Swift · SwiftUI · Native macOS 14 app · Local JSON storage

PRIVACY STANCE

Saves locally to your Mac; deliberately never stores credentials.

Want an app like this for your business?

We design and build native apps end to end — and we'll pressure-test your idea free.
